

PharmacyApp

Staff Quick-Start Guide

Welcome! This guide covers the everyday tasks you'll use most — starting the app, billing a customer, adding patients and stock, and taking a backup. For anything not covered here, ask the full User Guide or your manager.

1. Starting PharmacyApp

1. Find the PharmacyApp shortcut on the desktop.
2. Double-click it to open the app.
3. No internet connection is needed for daily use — billing, inventory, and patients all work offline.

2. Creating a Bill (Most Common Task)

Step 1 — Add medicines

1. Go to the Billing screen.
2. Type the medicine name in Search Medicine and select it from the list.
3. Enter the quantity needed.
4. Repeat for each medicine on the order.

Step 2 — Add the patient

- If they're already in today's queue, select them from the Visiting Today list.
- Otherwise, type their Name and Phone Number directly.

Note: Adding a phone number lets you share the bill on WhatsApp. Leaving patient details blank saves the bill as a Walk-in sale.

Step 3 — Payment and generate

1. Choose the Payment Method (Cash, UPI, etc.) for the medicine amount.
2. If a consultation/service fee applies, enter the Fee Amount and its payment method.
3. Click Generate Bill to open the Bill Preview.
4. From the preview: Save as PDF, Print, or Share via WhatsApp.

Note: Print option will default select as A5 size and Portrait.

3. Adding a New Patient

1. Open the Patients screen.

2. Click Add Patient.
3. Enter Patient ID, Name, and Phone Number, then Save.

To find an existing patient, use the search bar and search by ID, Name, or Phone Number.

4. Managing Inventory

Adding a new medicine

1. Go to the Inventory tab and click + Add Medicine.
2. Fill in Name, Stock Quantity, Low Stock Alert, Price/Unit, Batch Number, and Expiry Date.
3. Click Add Medicine to save.

Adding stock to an existing medicine

- Find the medicine under the All tab and tap the + icon to add quantity.

Note: A medicine can only be deleted once its stock reaches 0 — this protects stock and billing history.

5. End-of-Day Backup

1. Open Maintenance → Backup & Restore.
2. Click Export Backup.
3. Choose a save location (ideally a USB drive or cloud folder, not just the same computer).

Note: Take a backup daily, and always before Data Clean-up or an app update. There is no undo for a deleted bill without a backup.

6. If Something Goes Wrong

App won't open / shows a missing DLL error:

This means the Microsoft Visual C++ Redistributable Runtime is missing. Contact your admin — this only needs fixing once per computer.

Accidentally deleted a bill or patient record:

Stop and check for a recent backup under Maintenance → Backup & Restore → Restore. There's no undo otherwise.

Can't delete a medicine:

Its stock must be at 0 first — this is intentional, to protect billing history.

Quick Reference

Task	Where to Go
Start the app	Double-click the PharmacyApp desktop shortcut
Set up pharmacy details (once)	Maintenance → Settings
Create a bill	Billing → search medicine → add patient → Generate Bill
Share a bill on WhatsApp	Billing → Generate Bill → Share via WhatsApp (needs patient phone number)
Add a new medicine	Inventory → + Add Medicine
Add stock to a medicine	Inventory → tap + icon on that medicine
Add a new patient	Patients → Add Patient
Add patient to today's queue	Patients → search → Add to Visiting Today
Edit or delete a bill	Reports → find bill → Edit / Delete
Back up data (do daily)	Maintenance → Backup & Restore → Export Backup
